### **TTM RRESOURCES INC. 2006 Moly/Gold Exploration Program Underway – Up To 3000 Meters of Diamond Drilling Planned**

TTM Resources Inc. ("TTM") announces that the Company has begun its 2006 exploration program. This includes an initial drill program of approximately 2000 – 3000 meters of diamond drilling on the "Road" zone of its Moly/gold property just outside of Pemberton, British Columbia Canada. TTM intends to expand its geochem ground survey from the 2005 exploration season in an effort to extend the strike of the Road Zone area and test other parallel mineralized systems located to the southwest.

The Road Zone mineralization consists of pyrite, pyrrotite, molybdenite, bornite and chalcopyrite. The Road Zone to date is at least 200 meters wide and 500 meters long and is open along strike and to depth. Located to the southwest are two additional mineralized zones that run parallel to the "Road" zone mineralization,. These parallel systems are very similar to the mineralization found at the "Road" zone and will also be explored during the 2006 exploration season to determine their relationship. The mineralization on the property strikes in a northwest / southeast direction and dips 60° to subvertical north.
