TTM Completes Phase 1 2000 Meter Copper- Moly Drill Program Road Zone TTM Commences Phase 2 1000 Meter Copper- Moly Drill Program Breccia Zone

TTM Resources Inc. announces that it has completed Phase 1, a 15-hole (2000-meter) drill program on the Road Zone, of its 2006 drill program and has commenced Phase 2 of the program. While both copper and Molybdenite were encountered in 12 of the 15 holes drilled, the grade and length of the mineralization was not sufficient to continue drilling without further Geochemistry and Geophysical analysis. Both are underway at this time in order to determine the location of our next drill program in the Road Zone area.

After receiving the results from the recently completed IP and geochemical surveys on the Breccia Zone, the Company filed an amendment to the existing drill permit for up to eight drill sites on the Breccia Zone. Preparations are now underway to commence the minimum 1000 meter program within a week.

The 3D IP survey identified two large, high-priority, chargeability anomalies within the survey area, approximately 300 X 500 meters in size. Within the same grid area, rock sampling returned significant results in both molybdenum and copper with individual samples assaying greater than 0.3% molybdenum and 1.0% copper.

During the 2005 exploration program, the Breccia Zone was the #1 targeted area for drilling, but due to extensive snow this winter, and the discovery of the Road Zone which was much more drill accessible, the program was delayed until the Road Zone program was complete and the snow cap receded.

Further ground surveys have been completed north of the Breccia Zone in the Ryan River area which was staked in May, and with results mirroring those of the Breccia Zone. Samples are currently being assayed and results will determine the type of program to be conducted in 2007.

A new mineralized zone has been discovered at kilometer 14 (the main camp is located at km 17) on the Rutherford Creek road. Initial results from limited soil sampling are considered very promising and early analysis would indicate the zone has the size potential and geochemical response to warrant additional sampling and geophysical surveys with the intent of developing targets for a drill program this fall or Spring 2007.

A crew has been mobilized to further explore the Deeker Creek property starting September 7, 2006. TTM intends to follow up on 2005's discoveries and determine what type of program can further develop this area.

Extensive soil and rock samples will be taken and once results are obtained the Company will determine a program for this fall or Spring 2007.

All work to date has helped the Company determine the most significant areas of interest and will focus its resources on the most significant zones of this extensive property.

The Mount Currie First Nations Band have been kept apprised, and have approved and support, our current and planned future activities. TTM Resources Inc. looks forward to their continued support.

On behalf of the Board of Directors,

W.K. Crichy Clarke
President & CEO
